

The future of technology

New Partnership

EUROLOGIX AND CEIA COME TOGETHER IN NEW PARTNERSHIP!

Eurologix Security has extensive experience as a global Turnkey solution provider of Security Detection equipment. Security X-ray technology and metal detection technology are paired when providing a total security checkpoint solution for people and baggage search.

Quality and Service is the foundation of Eurologix Security and finding a partner in the security detection industry that has the same ethos and values makes this the ultimate turnkey solution.

Eurologix Security and Ceia are both European Manufacturers of security Detection. Thus both companies are ISO 9001 Registered and comply to European directives. Ceia is the specialist manufacturer of Metal detection systems and solutions and Eurologix Security the advanced x-ray and product specialist of security detection.

Together in partnership, Eurologix Security can offer the Ceia premium metal detection systems for security and asset protection. The Ceia products are quality manufactured detection systems and have powerful false alarm and discrimination circuits. Their reputation in the Industry is excellent and the reliability and service support is renowned and bench marked as the best.

Eurologix Security are very proud to be in partnership with a fellow quality European manufacturing company. Both companies believe in technology, quality and customer service.

Please check our website and download the latest products from Eurologix Security and Ceia.

The future of technology

HI-PE Multi-Zone

HIGH PERFORMANCE WALK-THROUGH METAL DETECTOR

- High level of Detection Uniformity
- High Immunity to external interferences
- Highly visible double Display provides single or multiple location of weapons in transit
- Very high speed of Detection
- High Reliability
- Local or Remote Programming with networking capabilities

PD140SVR Scanner

VERY HIGH SENSITIVITY ENHANCED HAND HELD METAL DETECTOR

- Very High Sensitivity
- Detection of both Magnetic and Non-Magnetic Metals
- Optical, Acoustical and Vibration Alarm
- Long Battery Life
- Special Ergonomic Shape
- Very High Reliability
- Easy to Use
- Self-Calibrating
- Fast Inductive Battery Charger

The future of technology

SMD601 Loss Prevention System

PREVENTS THE LOSS OF VALUABLE METAL ITEMS

The SMD601 Loss Prevention System prevents the theft or accidental removal of metallic objects. As people transit the system, their metal content is compared to a saved personalized profile.

The superior uniformity of the electromagnetic field of the SMD601 Metal Detector provides very consistent metal detection readings on every transit of an individual which may be wearing non-removable items like prosthetics, wedding rings, piercings etc.

This is a unique feature of the SMD601 and results in the creation of a true metal content profile for the person being screened.

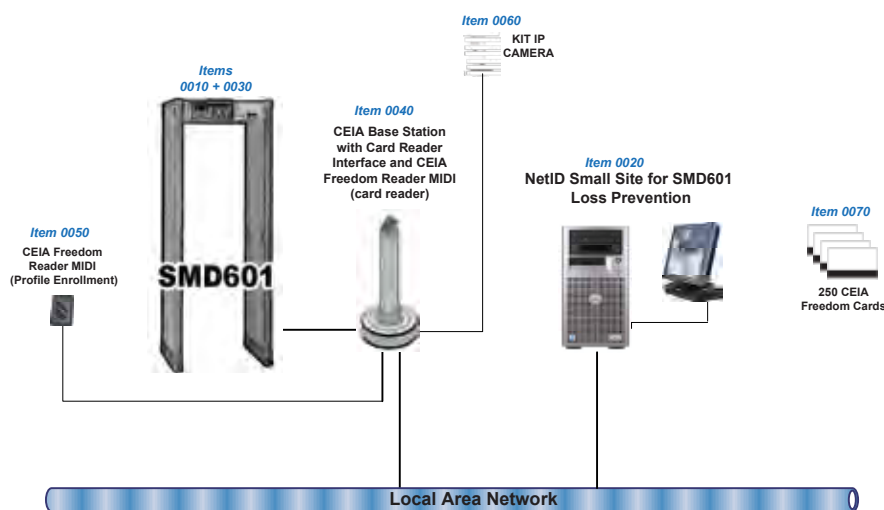

Each transit is compared with the individual's profile stored in the data base. Any significant differences to previous transits are highlighted by the software.

The personal metal content data is sent securely over the network and stored in encrypted form. SMD601 Profiling Technology allows detection of these targets while ignoring non-removable personal objects.

CEIA Ref. Offer No. 20023712

The future of technology

Eurologix Shoe Scanner

How it works...

Today's security solutions are missing a critical step when it comes to weapons detection and loss prevention. Traditional metal detectors and security screening devices stop short of detecting metals in shoes or on the ankles and feet.

Advantages...

- Prevents the need for shoe removal.
- Convenient and time saving
- Ensures safety
- Can be anywhere including airports, stadiums, shops etc.

Prices start from £1800!

Velocity Corporate

How it works...

The Velocity Corporate X-Ray security inspection system is an innovative designed system for screening small packages, briefcases, mail room items and general screening security.

Advantages...

- Every unit has advanced computer imaging
- Advanced self diagnostics
- Provides user with reliable high resolution images and superior image processing
- Ideal for general purpose screening with compact space efficiency

Inorganic & Organic discrimination!

Body Scanners

INTRODUCING THE IONISING BODY SCANNER AND THE MILLIWAVE CAMERA

The SMD601 Loss Prevention System prevents the theft or accidental removal of metallic objects. As people transit the system, their metal content is compared to a saved personalized profile.

The superior uniformity of the electromagnetic field of the SMD601 Metal Detector provides very consistent metal detection readings on every transit of an individual which may be wearing non-removable items like prosthetics, wedding rings, piercings etc.

This is a unique feature of the SMD601 and results in the creation of a true metal content profile for the person being screened.

Milliwave Gen-2

Features

- Detects concealed objects in as little as 0.5 seconds
- Anatomical details are not revealed thereby eliminating personal privacy issues
- Completely passive system - no transmission of radiation or energy of any kind
- Monitoring & detection displayed in real time
- Provides stand off detection of large explosives, liquids, gels, and other ferrous and non - ferrous items
- No physical pat down required

Ionising Body Scanner

Features

- The Body scanner provides the detection of all dangerous subjects within 10 seconds
- Metal and non metal weapons, explosives, dangerous liquids, diamonds, gold and illicit drugs (incl. swallowed).
